

Catherine MacLaughlin

Unsung Women of Industry

Directing Hair-Line Accuracy

Eleven years working accurately to thousandths of an inch is the story of Catherine MacLaughlin, who now heads one of the Monroe Calculating Machine Company's inspection departments. During this time, she has progressed from a routine bench job to directing the activities of ten women and two men.

The work of her department is of vital importance. A single slip in the inspection of a part and several hundred dollars are lost due to a faultily finished product. She is shown above instructing one of her assistants in the inspecting of bearing rods. This operation alone involves hair-splitting accuracy.
